Portfolio: 0xanandportfolio.vercel.app

1 Education

Centurion University of Technology and Management

Vizianagaram, Andhra Pradesh

Bachelor of Technology in Computer Science (Cyber Security and Blockchain Specialization) Aug 2023 – May 2027

- CGPA: 8.9/10.0
- Relevant Coursework: Data Structures and Algorithms, Object-Oriented Programming, Computer Networks, Database Management Systems, Smart Contract Architecture, Blockchain Consensus Mechanisms, Advanced Cryptography, Decentralized Application Design

2 Technical Skills

Languages: Solidity, Rust, TypeScript, JavaScript (ES6+)

Blockchain and Smart Contracts: Hardhat, Truffle, OpenZeppelin, Remix IDE, Ethereum, Polygon, Flare, EVM Internals, Gas Optimization, Access Control Patterns, UUPS Proxy Pattern, Smart Contract Security

Web3 Integration: Ethers.js, Web3.js, MetaMask Wallet Integration, DApp Development

Frontend: React, TypeScript, TanStack Router, Tailwind CSS, Responsive Design

Backend: Node.js, NestJS, Express.js, REST APIs, PostgreSQL, Prisma ORM, MySQL, JWT Authentication, RBAC, Swagger/OpenAPI

Security and Testing: Nmap, OWASP ZAP, Postman, Burp Suite, AST Analysis, CVSS Risk Classification

Tools: Git, GitHub, Docker, Linux, Vercel, Render, CI/CD

3 Experience and Projects

Eclipse Protocol – Confidential-Compute Asset Management Protocol

Solidity, TEE, Flare, TypeScript

github.com/Eclipse-Protocol

– Flare Summer Signal Hackathon (Team of 2)

- Co-built a confidential asset management protocol on Flare where trading strategies remain hidden inside a Trusted Execution Environment (TEE) while every trade and performance metric stays cryptographically verifiable on-chain
- Collaborated in a 2-member team to design and ship the protocol end-to-end within the hackathon timeline, handling smart contract architecture and verifiable on-chain reporting logic

BlockPulse AI – AI-Powered Blockchain Security Monitoring Platform

NestJS, TypeScript, React 19, PostgreSQL, Prisma, Ethers.js

block-pulse-ai.vercel.app – HACKHAZARDS '26 – [View in Portfolio](#)

- Shipped a full-stack real-time wallet threat-monitoring platform with a 5-detector risk engine (unlimited approvals, ownership changes, large transfers, new contract interactions, wallet inactivity) producing a weighted 0–100 risk score
- Built an LLM-grounded AI security assistant with automated Email/Telegram alerting and on-demand PDF reports; hardened the API with rotating JWT refresh tokens, bcrypt, and rate limiting

Scalable Auth RBAC API

Node.js, Express.js, JWT, RBAC, PostgreSQL/MySQL

github.com/0xAnandDev/scalable-auth-rbac-api

- Designed a reusable authentication service with JWT access/refresh token rotation and granular role-based access control for multi-application use
- Built a REST API managing hackathon event lifecycles end-to-end – registration, team formation, submissions, and judge/organizer access control

Real-World Security Audits

Nmap, OWASP ZAP, Postman, Burp Suite

github.com/0xAnandDev/real-world-security-audits

- Conducted vulnerability assessments on live web applications using Nmap and OWASP ZAP for comprehensive attack surface mapping

- Performed API security analysis with Postman, documenting CVSS-based risk classification and remediation steps in professional audit reports

Midas – Transaction Processing System

Software Engineering, SDLC, Backend Systems

github.com/0xAnandDev/midas-transaction-processing-system

- Built a transaction processing system applying core software engineering principles, structured SDLC practices, and agile development workflows
- Focused on secure transaction handling and reliable backend processing logic

Solvigil – Smart Contract Security Analysis Platform

Node.js, Express, React, Tailwind CSS, AST Analysis

solvigil-scanner.vercel.app – [View in Portfolio](#)

- Engineered a full-stack static analysis tool detecting critical Solidity vulnerabilities (Reentrancy, Access Control, Unchecked Calls, DoS) via AST parsing
- Built a React/Tailwind dashboard with a CVSS-classified reporting engine, deployed on Vercel and Render

AagesLend Finance – DeFi Lending Protocol

Solidity, Hardhat, OpenZeppelin, React, Ethers.js

aageslend-finance.vercel.app – [View in Portfolio](#)

- Built a DeFi lending protocol with collateral management, borrowing mechanics, and an on-chain liquidation engine using role-based access control (OpenZeppelin AccessControl)
- Achieved sub-100k gas via storage packing, inline assembly (15% bytecode reduction), and batch processing (40% transaction reduction)

DecentroPay – Layer 2 Payment Application

Solidity, React, Web3.js, Polygon

decentropay.vercel.app – [View in Portfolio](#)

- Developed a decentralized peer-to-peer payment DApp on Polygon Amoy testnet with MetaMask integration, reducing gas costs over 90% versus Ethereum mainnet
- Implemented Solidity contracts for payment processing and transaction validation with Web3.js-based wallet authentication

4 Achievements and Activities

- **Flare Summer Signal Hackathon:** Shipped Eclipse Protocol, a confidential-compute asset management protocol, in a 2-member team
- **HACKHAZARDS '26:** Participation certification for shipping BlockPulse AI at the world's largest community-run hackathon
- **Competitive Programming:** Solved 50+ problems on LeetCode covering data structures and algorithms
- **Blockchain Club Member:** Active member of college blockchain club, staying updated with Web3 trends

5 Certifications

- Ethereum Bootcamp – Alchemy University
- JavaScript Development Workshop Certification
- React Development Workshop Certification
